Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Strubbe (4934985, cited by applicant).

Examiner agrees with applicant's finding (pg. 3-4), that Strubbe discloses a combine, first & second separating steps (col. 6, ln 9-16), threshing cylinder, separator cylinders, cages, sieves, rotor drum as claimed. However, the Examiner further found that the prior art does recite grain loss sensors (very high detection rate capability, grain separation sensor, provide input signals etc... col. 3 & 4), so that a control mechanism used to control the ground speed of the crop machine (ref. 37, 82, 44 detector & sensing means at various locations including the discharge end, col. 7 & 8, 10) as a relation of the rate and/or moisture content measured by these devices (col. 10, ln 19-23).

Since the Applicant reviewed the cited prior art in detail, it is should be familiar that the same structural elements cited in the claims are also found in the prior art.

As applied to claim(s) 1-14, in view of the structure disclosed/taught by Strubbe, the method of operating/using the device is inherent since it is the normal and logical manner in which the device is used.

Art Unit: 3671

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Strubbe ('562, '997, '031), Coers et al ('081, '836), Herwig, Somes, Mailander et al., Whitaker et al., Northup et al.
